SUMMARY REPORT

DS ADC 2202

MicroEndodontics clinical training on microscopes in Endodontics where biology and technology merge “vision beyond imagination” The introduction of micro endodontic instruments & microsurgery into dentistry has led to a whole new world of endodontics previously unknown to the clinicians as necessary means to treat difficult cases. A variety of instruments and techniques are discussed and demonstrated to understand about incorporation of the surgical operating microscope and microendodontic instruments into clinical practice to overcome the shortcomings of past conventional techniques in order to evolve as the discipline evolves. Endodontics often present challenges to the clinician possessing difficulty in isolation, access, negotiation of curved and narrow root canals, calcified canals, difficulty in obturation and managing anatomical variations. Modern concepts of molar Micro-endodontic treatment with an opportunity to use nickel-titanium technology, microscope enhanced Endodontics and modern concepts of root canal obturation. Step by step hands -on based training including life clinical demonstration & orientation to the microscope
